

## LM1575-5.0/LM2575-5.0

### Simple Switcher Step-Down Voltage Regulator

#### General Description

The LM1575/LM2575 are monolithic integrated circuits that provide all the active functions for a step-down (buck) switching regulator. These devices feature a 5V output capable of driving a 1A load with excellent line and load regulation.

Requiring a minimum number of external components, these regulators are simple to use and include internal frequency compensation and a fixed-frequency oscillator.

The LM1575/2575 offers a high efficiency replacement for popular three-terminal linear regulators. It substantially reduces the size of the heat sink, and in many cases no heat sink is required.

A standard series of inductors are available from several different manufacturers optimized for use with the LM1575/LM2575. This feature greatly simplifies the design of switch-mode power supplies.

Other features include a guaranteed  $\pm 3\%$  tolerance on output voltage within specified input voltages and output load conditions, and  $\pm 10\%$  on the oscillator frequency. External shutdown is included, featuring less than 200  $\mu\text{A}$  standby

current. The output switch includes current limiting, as well as thermal shutdown for full protection under fault conditions.

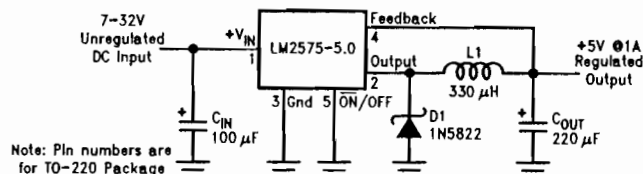

#### Features

- 5V output,  $\pm 3\%$  Max over line and load conditions
- Guaranteed 1A output current
- Wide input voltage range, 7V to 35V
- Requires only 4 external components
- 52 kHz fixed frequency internal oscillator
- Low power standby mode,  $I_Q$  typically  $< 200 \mu\text{A}$
- 82% efficiency
- Uses readily available standard inductors
- Thermal shutdown and current limit protection

#### Applications

- Simple high-efficiency step-down regulator
- Efficient pre-regulator for linear regulators
- On-card switching regulators

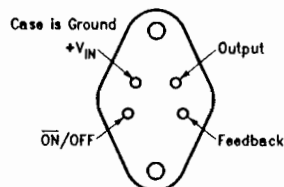

#### Typical Application

TL/H/10527-1

#### Connection Diagram and Order Information

## Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Total Supply Voltage (see Figure 5)	40V
ON/OFF Pin Input Voltage	$-1 \leq V \leq 15V$
Output Voltage to Ground (Steady State)	-1V
Power Dissipation	Internally Limited
Storage Temperature Range	-65°C to +150°C

Minimum ESD Rating (C = 100 pF, R = 1.5 k $\Omega$ )	2 kV
Lead Temperature (Soldering, 10 sec.)	260°C
Maximum Junction Temperature	150°C
Operating Temperature Range	
LM1575-5.0	-55°C $\leq T_J \leq$ +150°C
LM2575-5.0	-40°C $\leq T_J \leq$ +125°C

**Electrical Characteristics** Specifications with standard type face are for  $T_J = 25^\circ\text{C}$ , and those with boldface type apply over full Operating Temperature Range. Unless otherwise specified,  $V_{IN} = 12V$ , and  $I_{LOAD} = 200\text{ mA}$ .

Symbol	Parameter	Conditions	Typ	LM1575-5.0 Limit (Note 2)	LM2575-5.0 Limit (Note 3)	Units (Limits)

Note 1: Also intended to be used in military applications.  
Note 2: All limits are for production test.  
Note 3: All limits are for production test.  
Note 4: External components are as shown in Figure 1.  
Note 5: Output current limited by load regulation.  
Note 6: Feedforward network is disabled.  
Note 7: Feedforward network is disabled.

## Typical

OUTPUT VOLTAGE CHANGE (mV)

OUTPUT CURRENT (A)

NORMALIZED FREQUENCY (K)

**Note 1:** Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics.

**Note 2:** All limits guaranteed at room temperature (standard type face) and at **temperature extremes (bold type face)**. All limits are used to calculate Average Outgoing Quality Level, and all are 100% production tested.

**Note 3:** All limits guaranteed at room temperature (standard type face) and at **temperature extremes (bold type face)**. All room temperature limits are 100% production tested. All limits at **temperature extremes** are guaranteed via correlation using standard Statistical Quality Control (SQC) methods.

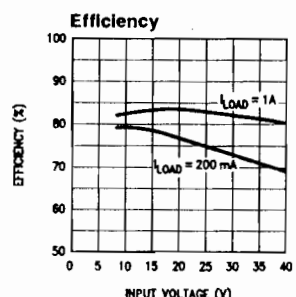

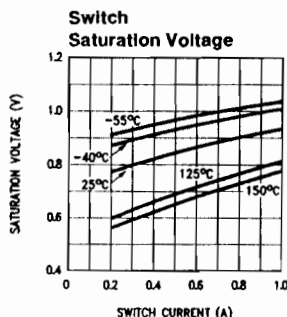

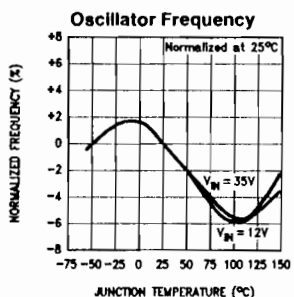

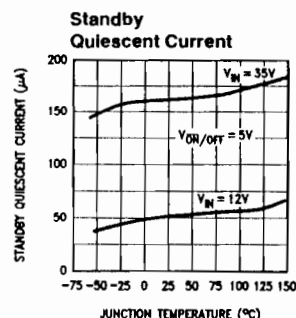

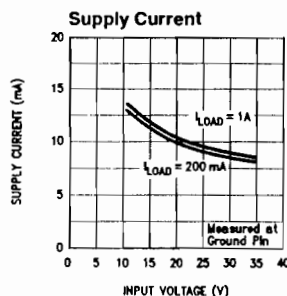

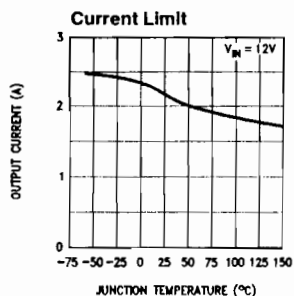

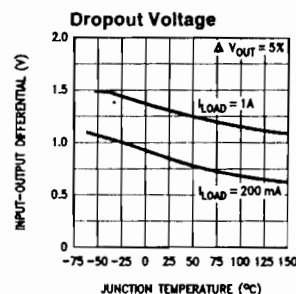

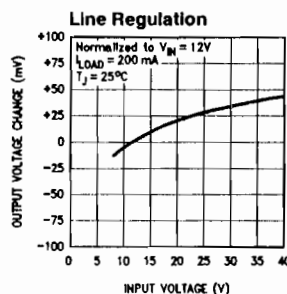

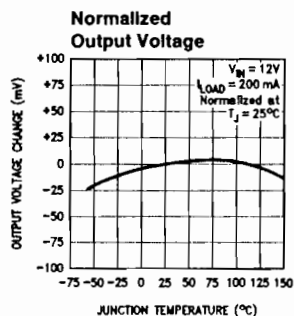

**Note 4:** External components such as the catch diode, inductor, input and output capacitors can affect switching regulator system performance. When the LM1575/LM2575 is used as shown in the *Figure 1* test circuit, system performance will be as shown in system parameters section of Electrical Characteristics.

**Note 5:** Output (pin 2) sourcing current. No diode, inductor or capacitor connected to output.

**Note 6:** Feedback (pin 4) removed from output and connected to 0V.

**Note 7:** Feedback (pin 4) removed from output and connected to 12V to force the output transistor OFF.

## Test Circuit and Layout Guidelines

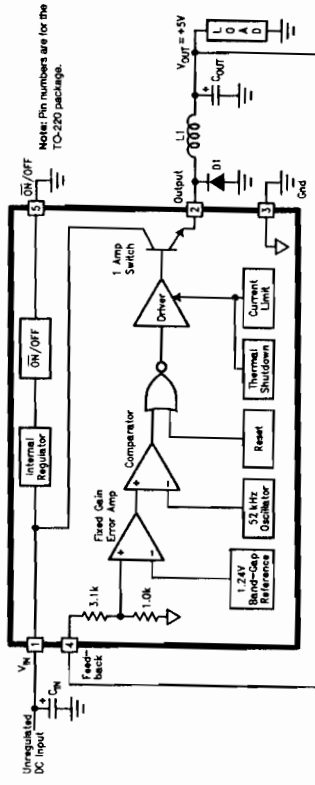

Notes: Pin numbers are for the TO-220 package.  
C<sub>IN</sub> — 500pFSA107M505 (Sprague)  
C<sub>OUT</sub> — 500pFSA227M105 (Sprague)  
D1 — any manufacturer  
\*For V<sub>IN</sub> ≤ 35V, D1 should be 310005 or MBR350.  
L1 — 415-0926 (AIE) for I<sub>LOAD</sub> ≤ 0.8A, 430-0635 (AIE) for I<sub>LOAD</sub> ≤ 1.0A  
5-pin TO-220 socket—2396 (Loranger Mfg. Co.)  
4-pin TO-3 socket—8112-AG7 (Augel Inc.)

TU/H/10827-7

As in any switching regulator, layout is very important. Rapidly switching currents associated with wiring inductance generate voltage transients which cause problems. For minimal stray inductance and ground loops, the length of the leads indicated by heavy lines should be kept as short as possible. Single-point grounding (as indicated) or ground plane construction should be used for best results.

## Block Diagram and Typical Application

TU/H/10827-8

FIGURE 2

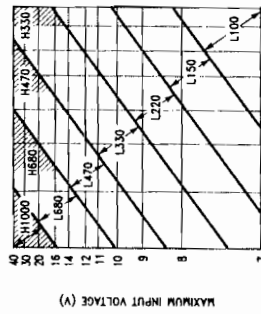

# LM1575/LM2575 Design Procedure

## Procedure

- Given:**  
V<sub>IN</sub> (Max) = Maximum input voltage  
I<sub>LOAD</sub> (Max) = Maximum load current
- Inductor Selection (L1)**  
A. From Figure 3, identify inductor code for region indicated by V<sub>IN</sub> (Max) and I<sub>LOAD</sub> (Max).  
B. From Figure 4, identify inductor value from the inductor code.  
C. Select from the three manufacturer's part numbers listed in Figure 4.  
Alternately, another inductor of the appropriate value may be used. It must be rated for operation at the LM2575 switching frequency (typically 52 kHz), and for a current rating of 1.25 × I<sub>LOAD</sub> (Max).

## Example

- Given:**  
V<sub>IN</sub> (Max) = 18V  
I<sub>LOAD</sub> (Max) = 0.8A  
Inductor Selection (L1)  
1. A. Code = L330  
B. Value = 330 µH  
C. Choose AIE 415-0926, Pulse Engineering PE 52627, or Renco RL1952

TU/H/10827-9

FIGURE 3. Inductor Value Selection Guide

Inductor Code	Inductor Value	AIE#	Pulse Eng.#	Renco#
L100	100 µH	415-0930	PE-92108	RL1955
L150	150 µH	415-0953	PE-53113	RL1954
L220	220 µH	415-0922	PE-52626	RL1953
L330	330 µH	415-0926	PE-52627	RL1952
L470	470 µH	415-0927	PE-53114	RL1951
